WEB DEVELOPMENT

ACTIVITY-BASED LEARNING

CONSOLIDATED PROJECT REPORT

Student Name	K. Kruphaw Nitthin
Roll Number	26001396
Branch / Section	CSD-1 (Sec-1)
Course	Web Development
Academic Year	2026–2027

Selected Case Studies

CASE STUDY	PROJECT TITLE

16	Travel Agency Website
18	Hotel Reservation Website Interface
27	Business Analytics Dashboard

Submitted as part of the Web Development Activity-Based Learning assignment.

1. Assignment Overview

The institute circular dated 15-10-2026 instructs B.Tech students to select any three case studies from the prescribed list of 30, design and develop the webpages, create a GitHub repository named WD-Activity-Based-Learning, upload all three case studies and one consolidated PDF report containing screenshots, and maintain a README.md with student details and the selected case-study titles.

Project Objectives

- Apply HTML and CSS concepts to design structured webpages.
- Organize content using navigation, cards, sections, forms, tables and dashboard layouts.
- Use suitable visual hierarchy, typography, colours and spacing to improve readability.
- Present the completed webpage interfaces through screenshots and document the selected work clearly.

Tools and Technologies

HTML5: page structure, semantic sections, navigation, forms and tables.
CSS3: layout, colour schemes, typography, spacing, cards, responsive presentation and visual effects.
GitHub: repository hosting and submission organization.

Selected Case Studies

16 — Travel Agency Website: travel destinations, holiday packages, trip details and inquiry-oriented content.
18 — Hotel Reservation Website Interface: room categories, facilities, tariffs and reservation form fields.
27 — Business Analytics Dashboard: revenue, users, sales trends, performance metrics, charts and recent activities.

The following sections describe the visible interface elements in the submitted screenshots. The screenshots are included as visual evidence of the webpage outputs.

2.1 Case Study 16 — Travel Agency Website

Website / Interface Name: WanderVista

Project Description

The Travel Agency Website presents a travel portal under the name WanderVista. Its interface is designed to help visitors explore destinations and holiday packages and begin planning a trip.

Key Interface Features

- Navigation links for Home, Destinations, Packages, Itineraries and Contact.
- A hero section with a travel-focused headline, background image and calls to action.
- A highlights strip showing destinations, holiday packages, happy travellers and travel support.
- Popular destination cards for Bali, Italy, Maldives and Norway.
- Featured holiday package cards with destination, duration, rating and package information.

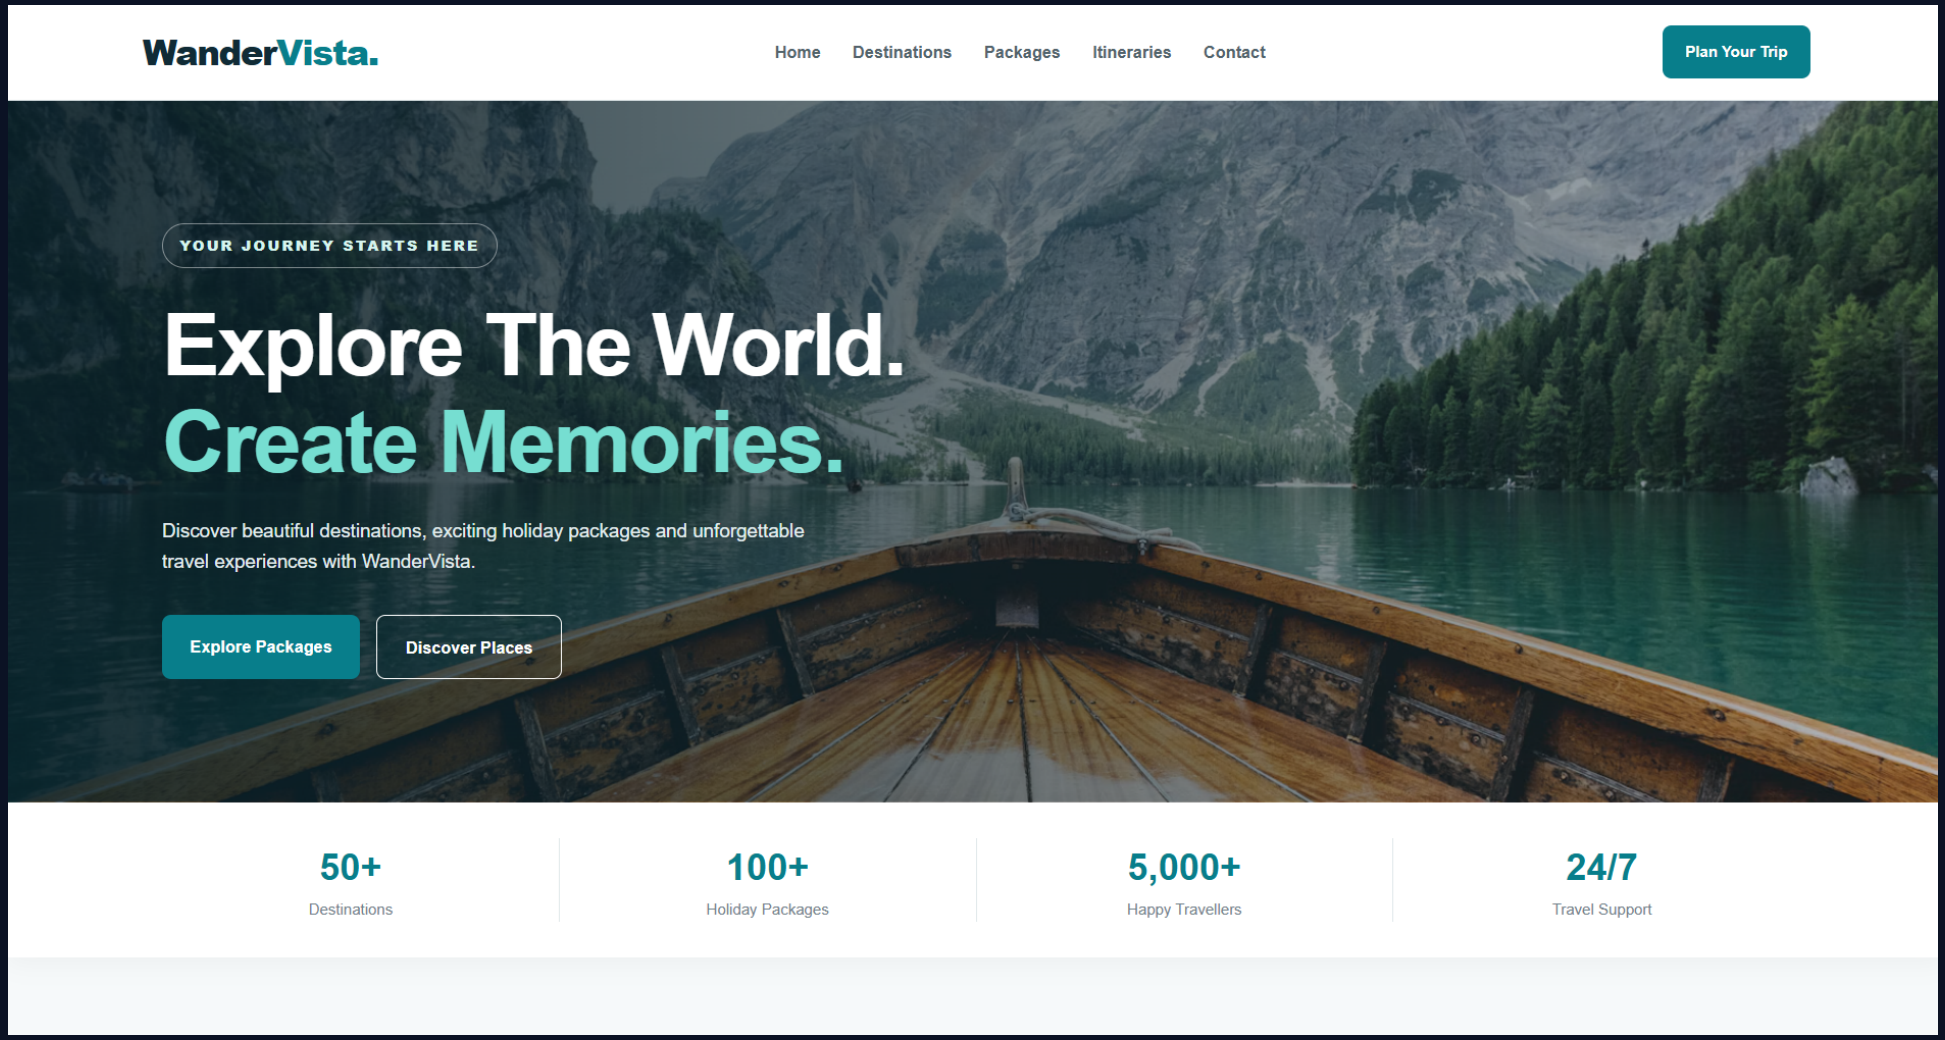

Purpose

To organize travel information in a visually engaging format and make destination and package discovery straightforward.

Screenshots

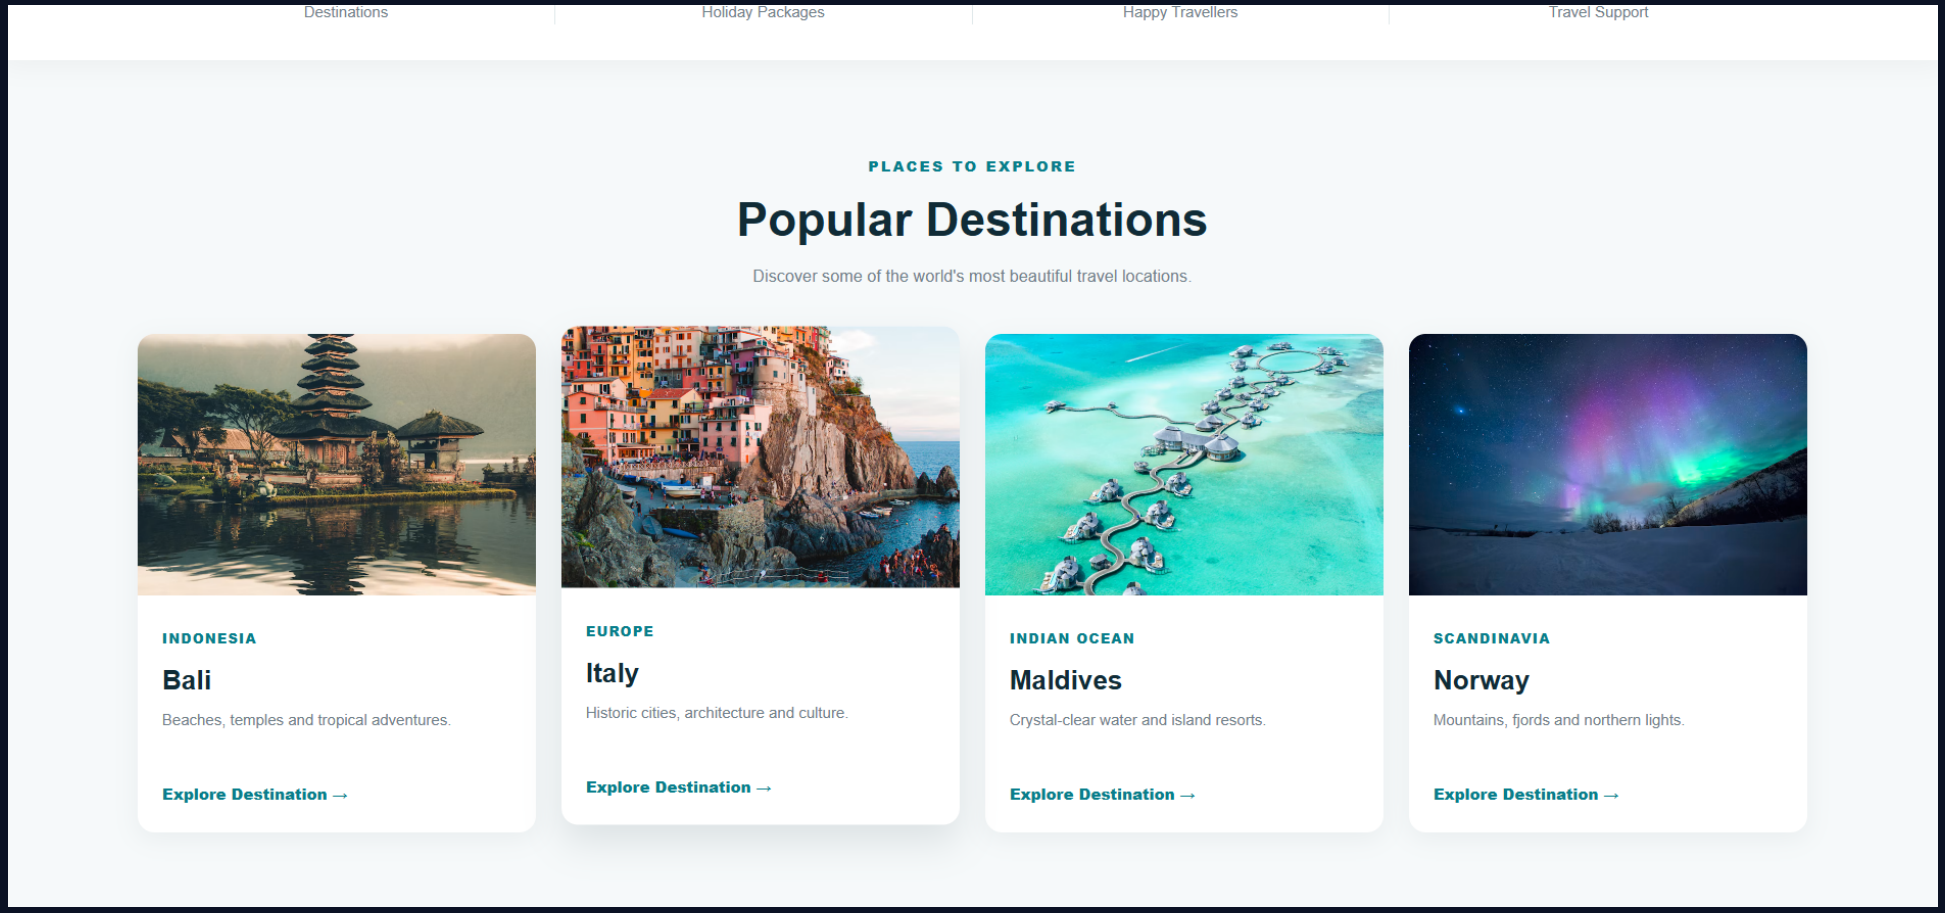

3 screenshots are included in the following pages as the visual output record for this case study.

Screenshot 10: Popular destinations displayed as image-based destination cards.

Case Study 16 — Travel Agency Website

Screenshot 11: Featured holiday packages with travel details and package presentation.

2.2 Case Study 18 — Hotel Reservation Website Interface

Website / Interface Name: Royal Grand Hotel & Resort

Project Description

The Hotel Reservation Website is presented as Royal Grand Hotel & Resort. The interface combines hotel branding, room information, facilities, tariffs and a reservation request form.

Key Interface Features

- Header navigation for Home, Rooms, Facilities, Tariffs and Contact, with a Book Now action.
- Hero section introducing the hotel and a quick availability form with check-in, check-out and guest fields.
- Room category cards for Deluxe, Executive, Suite and Family rooms, with images, facilities and sample nightly prices.
- Hotel facilities section covering Wi-Fi, restaurant, fitness centre, swimming pool, spa and parking.
- Room tariff table comparing occupancy, facilities and price per night.
- Reservation form fields for guest details, room category, dates, adults, children and special requests.

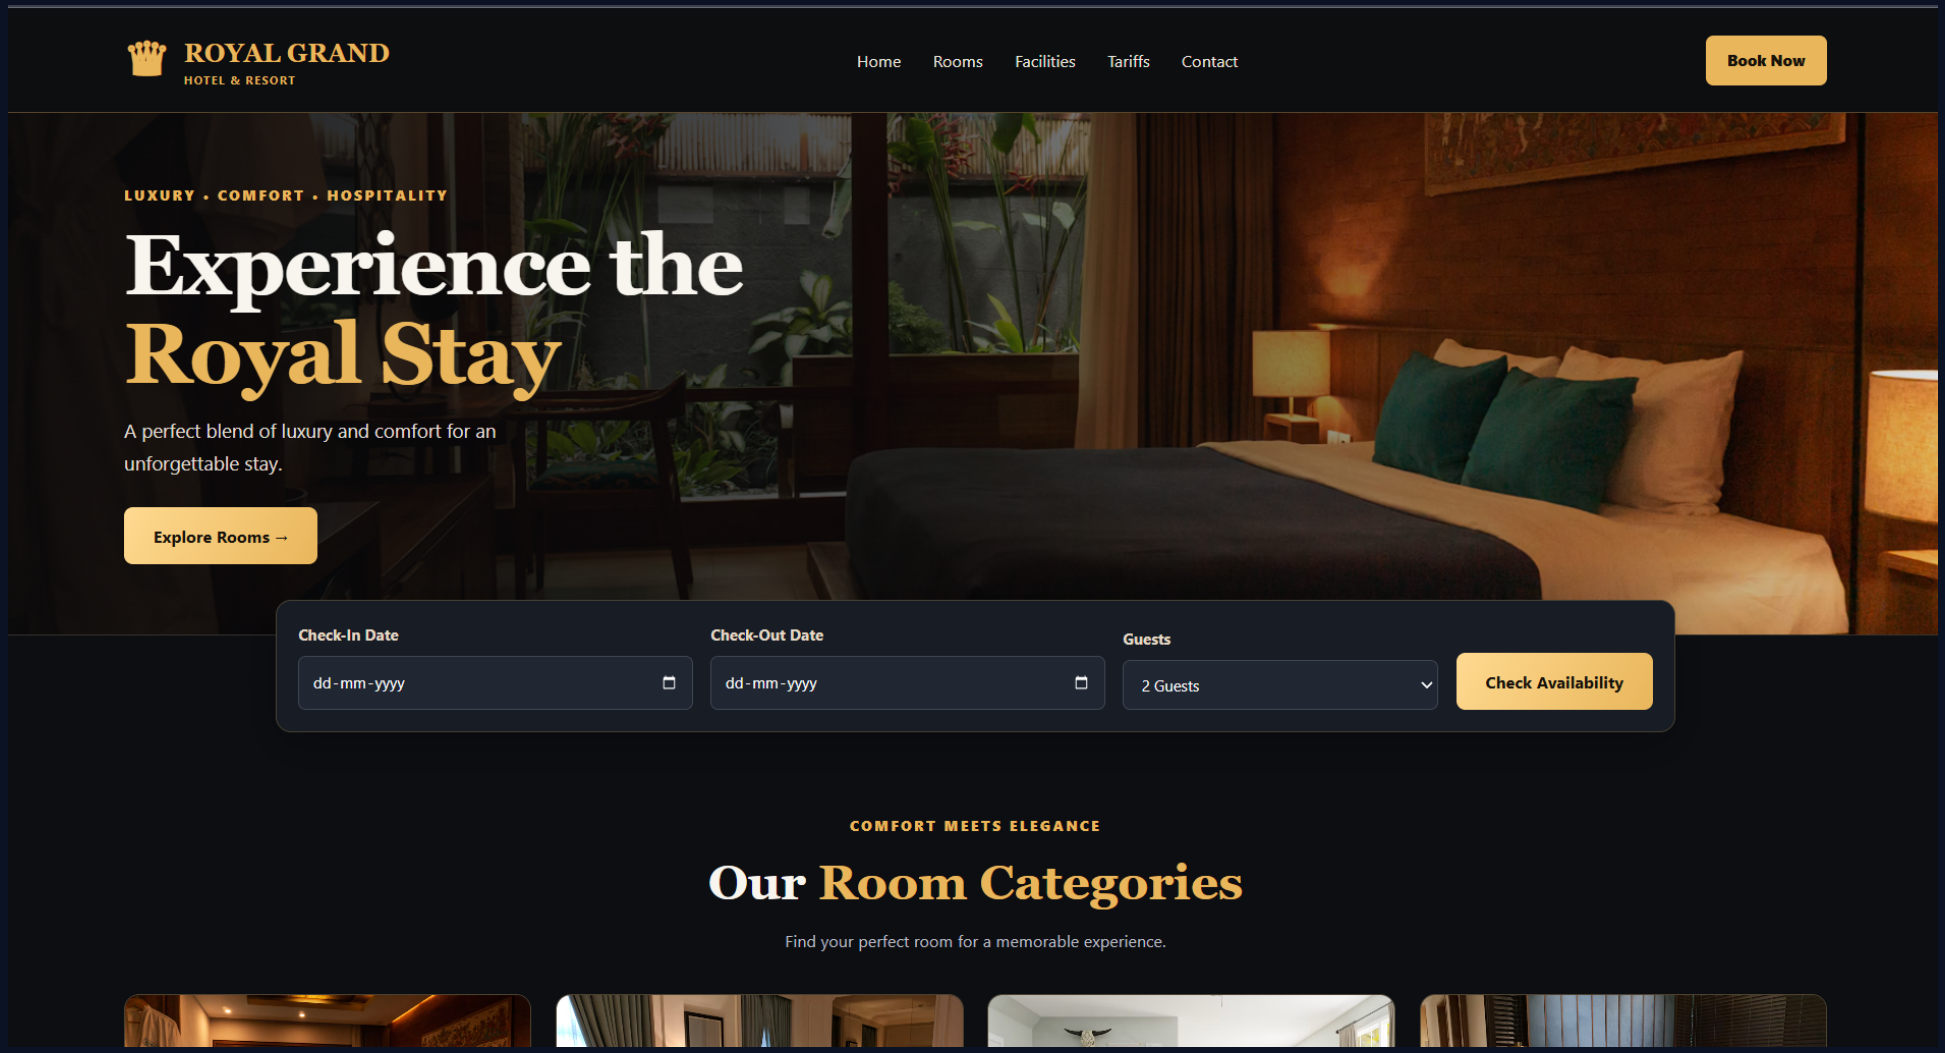

Purpose

To present hotel accommodation choices and provide a clear interface for visitors to submit reservation requests.

Screenshots

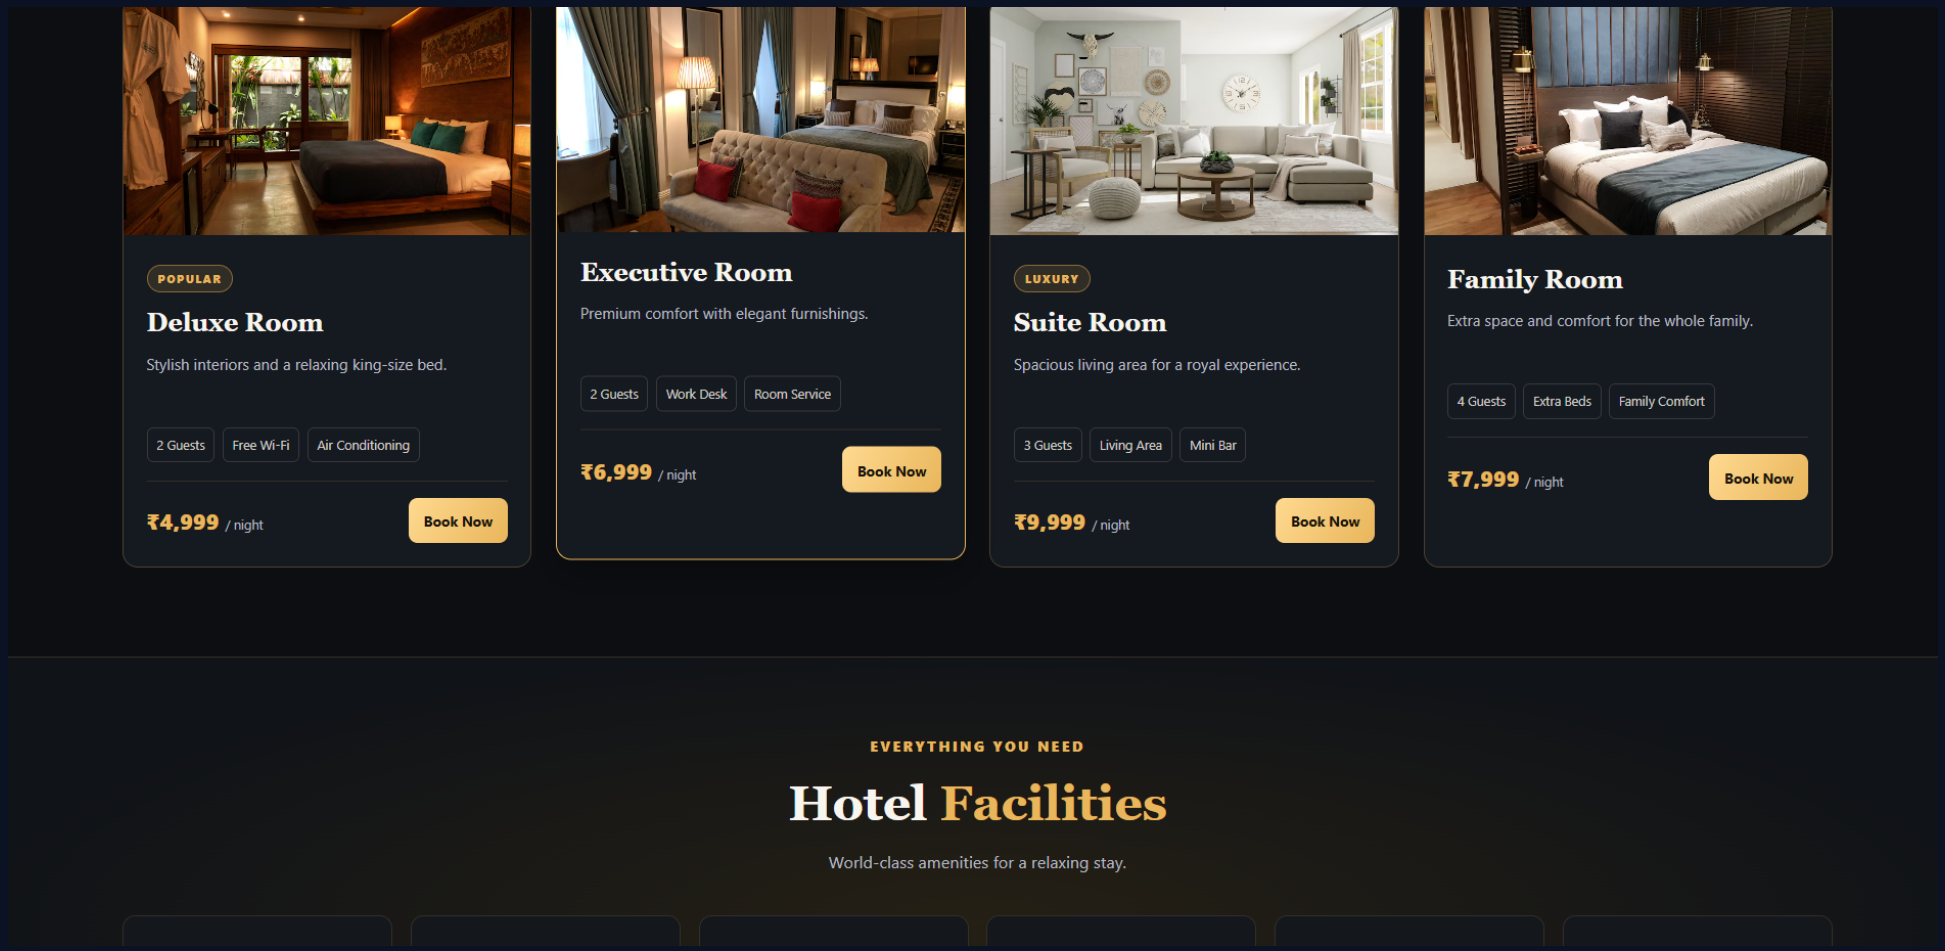

5 screenshots are included in the following pages as the visual output record for this case study.

Case Study 18 — Hotel Reservation Website Interface

Screenshot 4: Hotel homepage with brand identity, hero section and availability search.

Case Study 18 — Hotel Reservation Website Interface

Screenshot 5: Room category cards showing room images, descriptions, amenities and prices.

Case Study 18 — Hotel Reservation Website Interface

Screenshot 6: Hotel facilities section and visual presentation of available amenities.

Case Study 18 — Hotel Reservation Website Interface

Deluxe Room	2 Guests	Wi-Fi, AC, TV	₹4,999
Executive Room	2 Guests	Wi-Fi, AC, Desk	₹6,999
Family Room	4 Guests	Wi-Fi, AC, Extra Beds	₹7,999
Suite Room	3 Guests	Living Area, Mini Bar	₹9,999

* Prices are sample rates per night. Taxes and availability should be confirmed with the hotel.

2.3 Case Study 27 — Business Analytics Dashboard

Website / Interface Name: DataVista

Project Description

The Business Analytics Dashboard is presented as DataVista. It uses a dark dashboard layout with side navigation, summary cards, charts, performance indicators, product information, activity updates and a transactions table.

Key Interface Features

- Sidebar navigation for Dashboard, Sales, Users, Analytics, Reports and Settings.
- Summary cards for total revenue, total users, total sales and conversion rate.
- Sales trends chart comparing revenue and sales across dates.
- Performance metric rings for uptime, traffic, sales and customer satisfaction.
- Revenue by category chart and a top products list.
- Recent activities timeline and recent transactions table.

Purpose

To display important business indicators in one organized interface so that users can review sales activity and performance at a glance.

Screenshots

3 screenshots are included in the following pages as the visual output record for this case study.

Case Study 27 — Business Analytics Dashboard

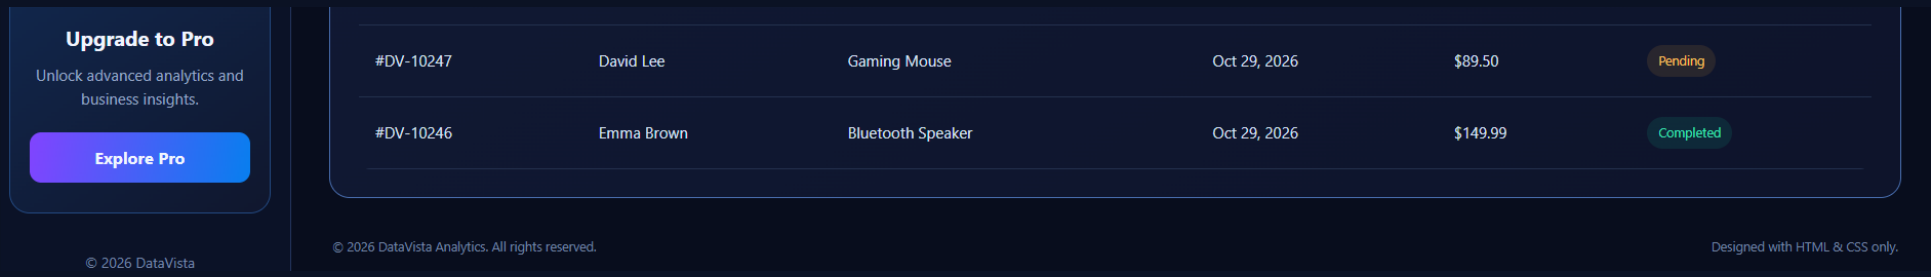

Screenshot 1: DataVista overview showing navigation, key business metrics, sales trends and performance indicators.

Case Study 27 — Business Analytics Dashboard

Screenshot 2: Dashboard details showing revenue categories, top products, recent activities and transactions.

Case Study 27 — Business Analytics Dashboard

Screenshot 3: Continuation of the recent transactions table and dashboard footer.

5. Overall Conclusion

The three selected case studies demonstrate different applications of web development. The Travel Agency Website organizes destinations and holiday packages; the Hotel Reservation Website Interface presents room categories, facilities, tariffs and reservation details; and the Business Analytics Dashboard organizes business indicators, charts and transaction information. Together, these projects provide practice in structuring webpage content and presenting information through clear, consistent interface layouts.

Submission Checklist

- Three selected case studies: Travel Agency Website, Hotel Reservation Website Interface and Business Analytics Dashboard.
- One consolidated PDF report containing the webpage screenshots.
- A README.md file containing student information and selected case-study titles.
- GitHub repository name as specified in the circular: WD-Activity-Based-Learning.

Evaluation Note

As stated in the circular, the activity carries 10 marks. Evaluation is conducted by the respective Web Development faculty member based on webpage design, GitHub repository organization and the student's understanding. Students should be prepared to explain and demonstrate their webpages.
